TECHNICAL SKILLS

Core Stack

Elixir/Phoenix

Erlang/OTP

Rust

C++

AI & Data

RAG / Local LLM

llama.cpp

Langchain

PostgreSQL

DevOps & Cloud

Kubernetes

Docker

AWS / Azure

Prometheus/Grafana

Legacy & Embedded

JavaCard

Smart Cards

Linux Kernel

EDUCATION

Groupe Ecoles Centrales

Centrale Méditerranée, France

Computer Engineering

Minor: Industrial IT & Embedded Systems

Professional Summary

Backend Engineer with over 15 years of experience in programming, operating, and testing SaaS software and storage systems. Expertise in distributed systems (Erlang/Elixir) and low-latency architectures. Currently focused on local AI inference (RAG) driven applications and building robust observability tools.

Work Experience

Backend Engineer | Santevet (Online bookings) 2023 - Present

📍 Remote, France

- **Local LLMs:** Building tools on top of local LLMs using llama.cpp.
- **SaaS Robustness:** Enforced robustness for Phoenix online bookings SaaS; fixed critical bugs, AWS instance sizing, and Linux settings.
- **Observability:** Implemented high-resolution user metrics, Prometheus/PromQL monitoring, and Grafana Dashboards.
- **Integrations:** Migrated Stripe API and added card payment methods.
- **Data Management:** Implemented a garbage collector for CQRS SQL data.

Phoenix

CQRS/ES

Rust

Prometheus

DevOps / Backend Engineer | Motorola Solutions 2021 - 2022

📍 Glostrup, Denmark

- **Kubernetes DevOps:** Managed cloud-based telecom product connecting Land Mobile Radio systems.
- **Microservices:** Wrote new K8s microservices, CI/CD pipelines (Azure Pipelines), and Helm charts.
- **SRE:** Implemented SLA measurement microservice, joined on-call rotation, and conducted post-mortems to improve reliability.

Kubernetes

Elixir

Azure Pipelines

Lead Backend Engineer | Kuantic

2018 - 2021

📍 Sophia-Antipolis, France

- **Fleet Management SaaS:** Technical interface for Stellantis.
- **Architecture:** Reshaped fleet management API into a general data broker API; modernized deployment processes.
- **Big Data:** Transformed fleet traffic model into a data broker business model using MapReduce pipelines.
- **Performance:** Improved stack reliability via Message Queues (RabbitMQ) and caching strategies.

R&D Engineer | Scaleway

2013 - 2017

📍 Paris, France

- **Distributed Storage:** Defined fault-tolerant storage architecture. Implemented NBD protocol in Erlang for live volume relocation.
- **AI Fraud Detection:** Owned the design of the fraud decision engine (Python/Scikit-learn). Fully automated support team workflows.
- **Testing:** Conducted distributed testing of AWS S3 using Erlang.

Backend Developer (Erlang) | Meetic (+500 people)

2010 - 2013

📍 Paris, France

- **Distributed Chat:** Maintained messaging stack (Erlang/Ejabberd) supporting **+200K simultaneous users**.
- **R&D:** Developed a real-time 3D supertracker for fraud monitoring and a game framework on top of Riak.

Embedded Software Consultant | Various (Philips, LG, Orange)

2002 - 2010

- Architected NXP mobileTV CAS feature and Android verification tools.
- Developed multi-threading for Philips STB DLI and IPTV middleware.
- Head of development for Orange DVB-H Mobile TV (SIM & KDA conditional access).

Key Projects

Telemetry Metrics Prometheus

[View on GitHub](#)

A small memory footprint counter able to track millions of different counters for high-resolution analytics.

Superls

[View on GitHub](#)

A multi-volume file tokenizer, indexer, and search engine.

Local LLM Scripts

[View on GitHub](#)

Scripts and tools for running local LLM inference.

Erlang Real-Time NIF

[View on GitHub](#)

Hardware clock extension for Erlang allowing real-time message scheduling.
